

## Easily author, maintain, print, and manage GHS-compliant labels and SDSs

## Configured to meet the needs of small- to mid-size businesses

The RightAnswer® System evolved from RightAnswer.com's custom enterprise document solutions, which have been exceeding the labeling needs (including GHS) of large, global organizations for more than 15 years. And now, the comprehensive capabilities of our document solutions are affordable for small- and mid-size companies.

Global, feature-rich, and 100% web-based since 2001, RightAnswer.com's newest release utilizes the latest Internet, database, and programming technologies to drive efficient work-flow processes to meet your needs.

Delivering unsurpassed user-friendly functionality, control, and access via a cost-effective SaaS (Software-as-a-Service) subscription model, the RightAnswer® System's architectural design and capabilities are robust, flexible, and scalable.

### The RightAnswer® System offers maximum flexibility with no capital expenditures or proprietary software required:

- Browser – 100% browser based, runs on current browsers
- Operating system – runs on PC and Mac
- Output independent – send documents/files to any printer – in your shop, down the block, across the globe

## When it's got to be Right. Now.®

### Business Benefits

- Meets the requirements of Fortune 100 companies – affordable for any size company
- Cradle-to-grave document life-cycle management reduces business exposure, provides litigation support, mitigates risk
- Streamlined implementation, minimal start-up time
- Robust to meet your needs today and tomorrow – adaptable, scalable, flexible
- Easily interfaces with other ERP/MRP/EHS and proprietary systems
- Global access to global functionality – all online in real time

### User Benefits

- Simple to learn – less than 30 minutes for most users; intuitive to authors and other Subject Matter Experts (SMEs)
- Robust document authoring tools and content/text manipulation options
- Extensive template capability for complex formats
- Extensive search options for document and information retrieval
- Event driven – user actions drive embedded work-flow processes
